

# Guide for DVX200 clip import on Blackmagic Design DaVinci Resolve 12.5

1) From Media mode, drag & drop SD card to "Smart Bin".

The clips saved in the HDD are also the same.

The screenshot displays the DaVinci Resolve 12.5 interface in Media mode. The left sidebar shows the Media Storage pane with a tree view of folders. The 'CAM\_SD 1' folder is highlighted with a red circle, and a red arrow points to the '433RAQH0' folder within it. Below this, the 'Smart Bins' section shows a 'DCIM' folder containing the clip '04330001.MOV'. A white box highlights the clip's metadata in the Media Pool:

ファイル名	開始タイムコード	終了タイムコード	継続時間	フレーム	種類	解像度	FPS	オーディオチャンネル	ファイルパス	フォーマット	コーデック	フラグ	実装日
04330001.MOV	01:00:00:00	01:00:59:30	00:00:59:30	3570	ビデオ+オーディオ	3840x2160	59.940	2	/Volumes/CAM_SD 1/DCIM/433RAQH0/04330001.MOV	QuickTime	H.264		火 3月 7 2017 13:37:29

The bottom right panel shows the clip's metadata, including start and end times, frame count, resolution, and audio channels. The 'Media' button in the bottom toolbar is also highlighted with a white box.
