Guide for UX Series clip import on Apple Final Cut Pro X 10.3

◆ In the case of 4GB spanned clips

The screenshot shows the Media Import dialog in Final Cut Pro X 10.3. On the left, a file browser shows a folder structure with 'MOV-Spanned' containing a subfolder '128VAQH0' with four MOV files (01260001.MOV to 01260004.MOV) selected. A blue callout box points to these files with the text 'Select all the 4GB-spanned clips.' The main preview area shows a video of a clock and a robot. Below the preview is a table of selected clips:

Name	Frame Size	Frame Rate	File Type	Codecs	Start	End	Duration	Size
01260001.MOV	1920 x 1080	59.94	QuickTime movie	'avc1', Linear PCM	01:00:00:00	01:11:29:00	00:11:29:00	4.28 GB
01260002.MOV	1920 x 1080	59.94	QuickTime movie	'avc1', Linear PCM	01:11:29:00	01:22:58:00	00:11:29:00	4.28 GB
01260003.MOV	1920 x 1080	59.94	QuickTime movie	'avc1', Linear PCM	01:22:58:00	01:34:27:00	00:11:29:00	4.28 GB
01260004.MOV	1920 x 1080	59.94	QuickTime movie	'avc1', Linear PCM	01:34:27:00	01:45:45:30	00:11:18:30	4.21 GB

Below the table, a unified clip is shown with properties: Clip #1, 1920 x 1080, 50, AVCHD, AVCHD 1080p50. On the right, the 'Import Selected' button is circled in red, and a callout box contains the text 'Close window after starting import' with a checked checkbox and the 'Import Selected' button.

[Case of AVCHD]

In the case of AVCHD, 4GB-spanned clips are displayed as an unified clip to import.
